

DANUBIA ATC

Data & AI Platform Meeting

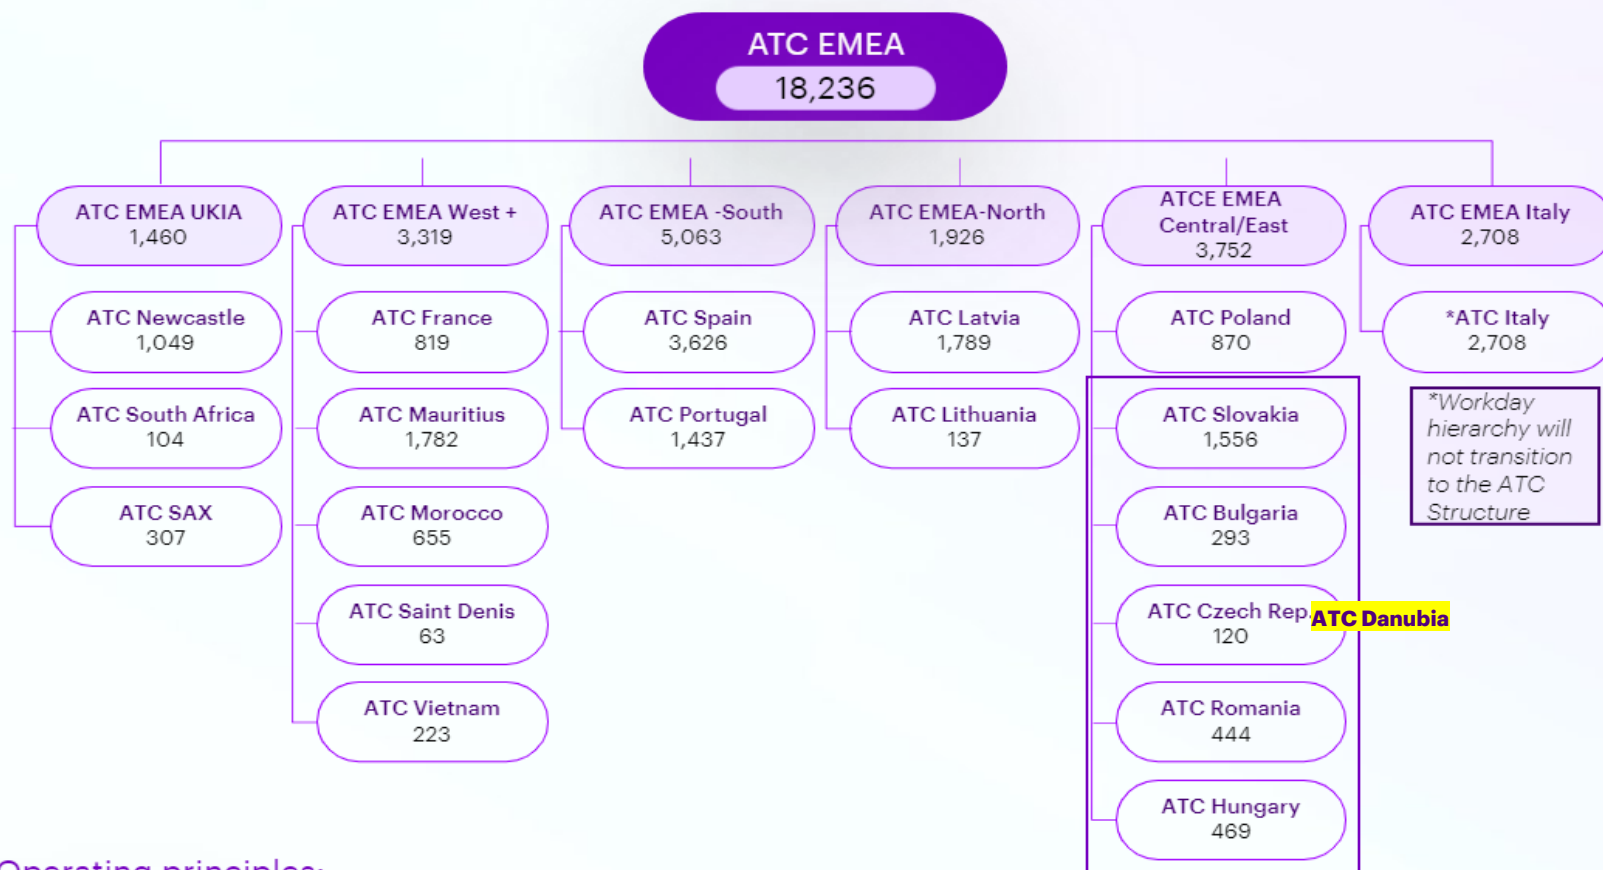

Adriana Tecucianu
February 2024

One ATC structure

EMEA ATC Cluster Structure & Principles

What and Why

6 ATC Clusters - consolidating 15 ATC centers spread across 52 cities in Europe improving network effectiveness, center maturity, alignment and enhanced governance framework

- Each ATC will have a specialized capability and in addition to supporting the local Market will also support delivery for other MU contracts
- ATC clusters will be leveraged for delivery for contracts requiring **Near Shore client proximity local language skills, same time zone support, Acquisitions and JVs** and contracts which are aligned to **Government and/or with Regulatory requirements** which restrict offshore usage
- Specialized capability & cost-effective talent at scale, delivering value across multiple local & global clients.
- Reliable and proven delivery engine for Accenture Technology, bringing differentiation through industry, innovation & intelligence to deliver high quality and value at speed.

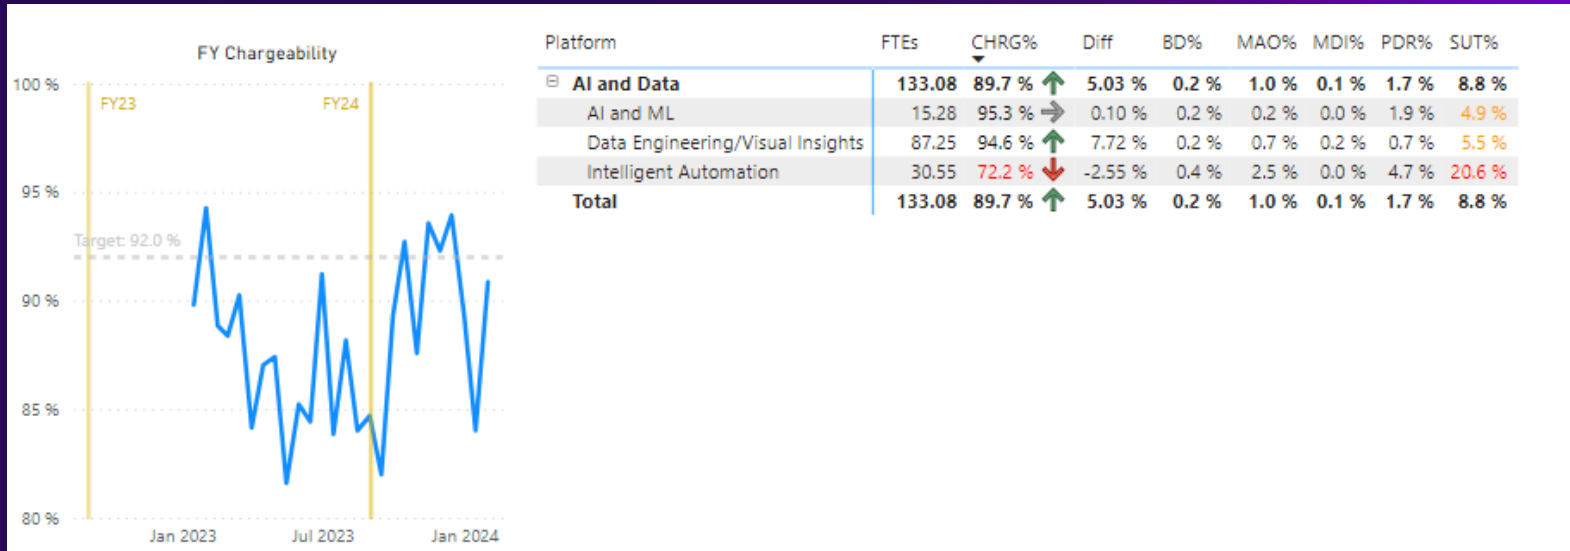

Operating principles:

- **Retain regional connection** and **will have the autonomy** to manage internal operations within each center. Reporting structures shall allow for **local flexibility & ownership for global capability building**
- No people movement from Tech MUs to ATCs as of now in phase 1 (including contractual workforce) except for moves already agreed in CEE (Danubia and Poland)

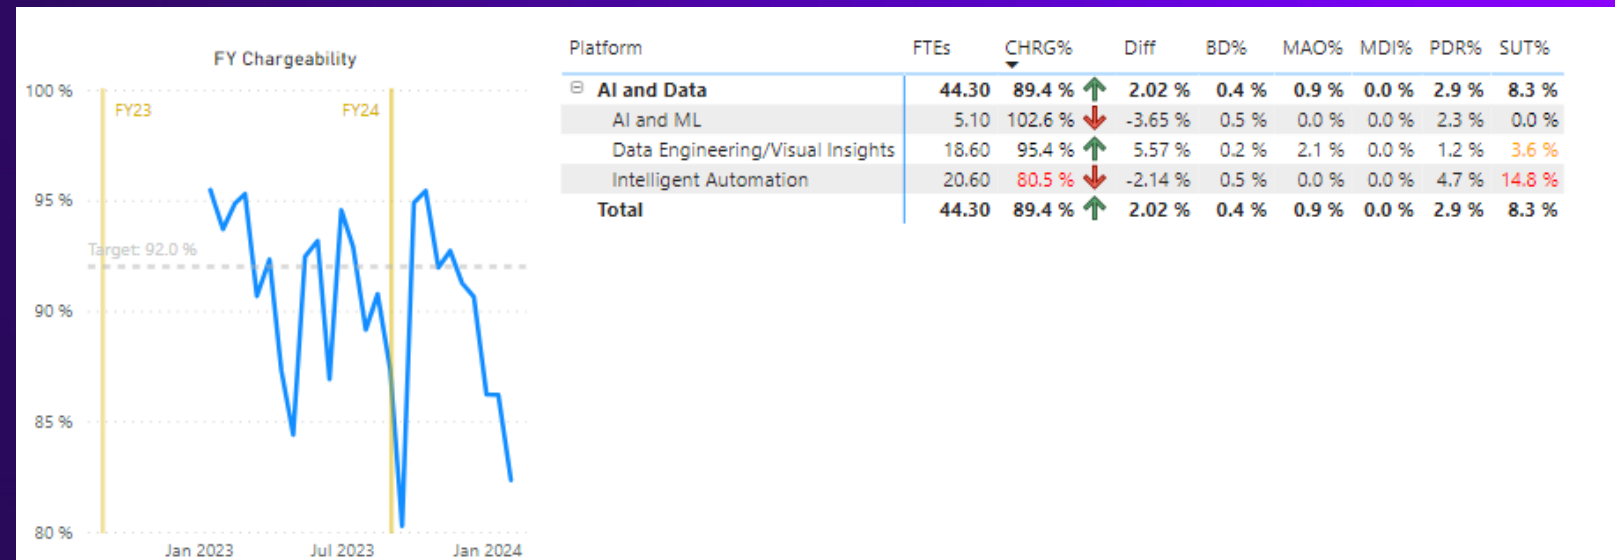

FY23 Data&AI Platform Summary

- **Focus technologies in FY23:**
 - **DEVI:** Snowflake, Big Data, PBI, Qlik, Tableau, Cloud DE, Python
 - **IAS:** Druid, UiPath, MS Power Platform, Blue Prism, Automation Anywhere, Enterprise Low Code platforms
 - **ML & AI:** Gen AI, Computer Vision, Data Science, Cloud ML engineering
- **Structured demand:** BMW, Roche. Main offerings: Cloud Data engineering, Visual analytics, Data science and ML
- **Chargeability and capability to deliver E2E projects.**
- **FY24 Focus areas:** Enhance the ML & Data Engineering team, particularly in the realm of cloud technologies. Develop the DEVI headcount with an emphasis on experienced professionals. Establish a robust talent pyramid in the ML & AI domain by recruiting additional mid to senior-level experts. Transition towards machine learning while facilitating upskilling in the field of General AI.
- **Increase HC with strong profiles in Cloud DE and ML. Focus location BG**

Chargeability YTD Danubia

RO Chargeability

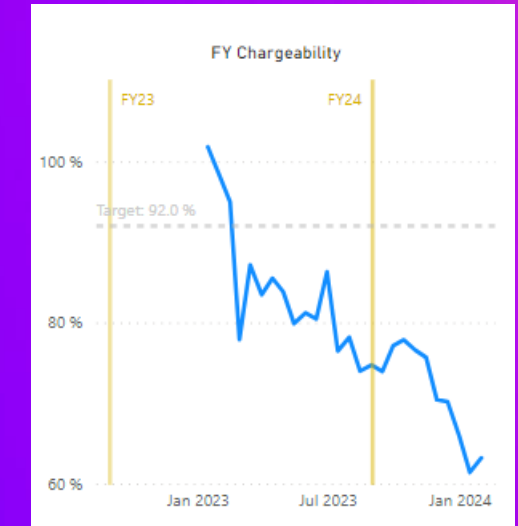

FY24 Strategy Key Points

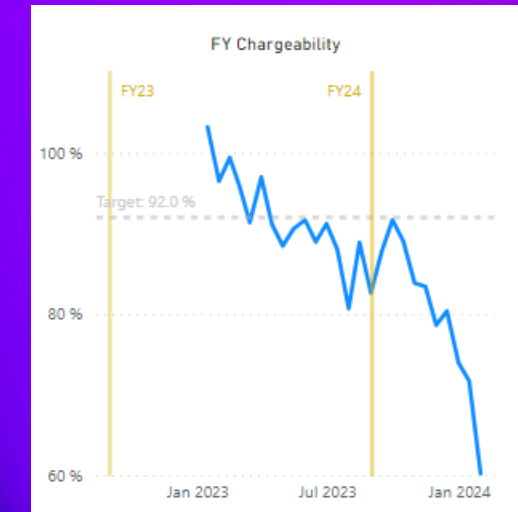

ROMANIA

- Establish a robust and engaged Snowflake community.
- Upskilling Power BI professionals with a focus on enhancing their expertise in data modeling, ETL (Extract, Transform, Load), and proficiency in various database tools, data scripting (SQL, Python).
- Fortify our Machine Learning (ML) team by expanding its size and capacity.
- Upskilling in Python DE/ML, GenAI focus.
- Reconfigure automation specialists to explore alternative tools and new career opportunities.
- Increase involvement in Sales and RFP responses.
- Continue to be present on the market to strengthen the local position of Accenture as IT company
- Contribute to internal forums in Europe

IAS Danubia

IAS Romania

Data&AI Platform Rules update

- **Personal chargeability target >93% (exceptions to be agreed with PL, e.g., due BD)**
- **Decrease of old vacation balance especially on bench**
- **Overtimes vs. work-life-balance – keep it under 150hrs / year**
- **Training budget 40hrs / person / year**
- **Bench rule**
 - **Proactive Bench Time Utilization (credentials, innovation, BBS, competence, E&C, Health and Safety mandatory trainings, TQ, IS Gold)**
- **Competence tracking focus:**
 - **skills.accenture.com (1st round done in Dec, make it a recurring action at least once per 6 months)**
 - **CVs**
 - **Certificates to be tracked in Workday**
- **Language skills**

GenAI Academy – Bucharest ATC

AUDIENCE: For people on bench

PREREQUISITES: Development background, minimum 1 year experience (> strong L12)

	 Python Basics	 Python Advanced	 GenAI Skills
Enabled for roles:	• Python Developer	• Data Engineer with Python	• GenAI Developer – text generation, image generation, R.A.G.
Achieved skills	• Python programming • Basic Data Engineering concepts • Pandas & NumPy basic knowledge • Prompt Engineering	• Pandas & NumPy • Data Science fundamentals • Basic GenAI concepts • MLOps basics	• GenAI development • Azure OpenAI / AWS Bedrock • Langchain • MLOps
